| No. of participants: 51 | Target group: wood biomass suppliers and potential investors in woodheating systems |

Type of meeting

study tour for buyers and sellers

Short summary:

Main goal of this study tour was to present idea of project “Woodheat solutions” to potential investors and local suppliers of wood biomass from Croatia by taking them to see woodheating systems in Slovenia.

We visited two heating systems one in Mozirje and one in Luce both with a power of 660 kW. We also visited one complex where wood chips are produced.

All of the places we visit are successful projects and they were very good example for all present on the study tour.

Participants feedback was positive on biomass as fuel and general idea to make people interested on this study tour was a success.
